

## Verbal procedure for Data Operators

After the program, the Data Operator announces

- **There are ... elements**
- **There are ... reviews**
- **First review on element number ... - e.g. Combination spin (currently at) level 3**

Discussion of the Technical Panel and final decision told only by the Controller

The Data Operator confirms the decision by saying

- **Element number ... changed to / from level ... to level ...**

Or

- **Element number ... stays**

When all reviews are done, the Data Operator says to the Controller

- **Please check the list**

The Data Operator reads the elements with the given levels, as well as the falls and/or the deductions

- **Deductions: there are ... falls and ... illegal elements**

Or

- **There are no deductions**

The Controller authorizes the elements or makes some additional changes.

At the end, the Data Operator closes the process by saying

- **Elements are authorized**

And presses the corresponding button.
